

# ***Memphis and Shelby County*** **MPO Travel Demand Model**

Peer Review Presentation

October 27, 2004

## **Introduction**

## Ground Rules

- Big Picture Input
- Stay out of the “weeds”
- Methodology and Process have been agreed to
- Ensure standards are met in the process
- Use time over the next two days efficiently

## Project Work Plan

- Aggressive project schedule
- Approximately 20 months
- Coordination sensitive
- Incorporates project team input
- Incorporates peer review input
- Project results in valuable regional tool

# Roadway Network Development

- Using network provided by MPO (with some cleaning)
- Developed data collection tool in TransCAD to enter in network attribute data
- Collecting street data for all streets in network (through TRIMS and windshield data)

## Network Collection Tool

- Allows for data entry in the field by a two person team
- Can copy and paste data from one link to another
- Helps to minimize coding errors

The screenshot shows a 'Enter Data' dialog box with the following fields and values:

- Road Name: ELMORE RD
- From: SYCAMORE VIEW
- To: HIGHWAY 70
- Speed Limit: 35 MPH
- Area Type: Suburban
- Driveways: Low
- Median Type: None
- Facility Type: Minor Arterial
- Heavy Vehicles Restricted?: ☐
- Symmetrical Section: ☒
- AB Lanes: 1
- BA Lanes: 1
- AB Lane Width: 10 Feet
- BA Lane Width: 10 Feet
- AB Shoulder Width: 0 Feet
- BA Shoulder Width: 0 Feet
- AB Parking Lane?: ☐
- BA Parking Lane?: ☐
- AB Bike Lane?: ☐
- BA Bike Lane?: ☐
- Comment: (empty text box)
- Finished button

## TRIMS Image Data

## Roadway Network Development

- Coordination with TAZ development to ensure appropriate level of detail for both
- Will develop centroid connectors in coordination with local staff
- Centroid connectors will indicate auto/non-auto access
- Using aerial photography and measurement data to clean interchanges in network

## Roadway Network Development

- One TransCAD file will contain all years of development – baseline, existing plus committed, long range plan, etc., by year
- Network will contain “link-dating” that indicates when a particular section will open (or close)
- Changes in network carry over to all potential scenarios and years

## Roadway Network Quality Control

- TransCAD tools, such as “Check Line Layer Connectivity” will be used
- Trip path tests and test loadings also will be used to identify network issues
- Plots with network attributes (lanes, speeds, median type, etc.) will also be submitted for review
- Checks against available aerial photography

## Development of TAZ Structure

- Expansion of prior zonal coverage
  - In the north (Tipton County)
  - In the east (Fayette County)
  - In the south (DeSoto County)
- Census TIGER Line files
- Geographic features
- Transportation facilities

## Development of TAZ Structure

- Land use consistency
  - Trip generators
  - Trip attractors
- Parking vs. Employment
- Existing land uses and zoning
- Evaluation of future land use plan

## Development of TAZ Structure

- Special generators
- Census boundaries
  - Tracts (suburban/rural)
  - Block groups (urban/suburban)
  - Blocks (urban)
- Centroid connectors and the network

## Land Use and Demographic Data Forecasts

- Development of Baseline Data (2000)
- Economic and Demographic Forecasts
- Forecasting Sequence
- Review Process

## Development of Baseline Data

- Population and Household Variables
  - Use data from Census 2000 (SF1, SF3)
  - Match Census geography to TAZs
- Employment Variables
  - Use 2000 at-place employment data
  - Reconcile using BLS
  - Group into generalized industry categories (NAICS)

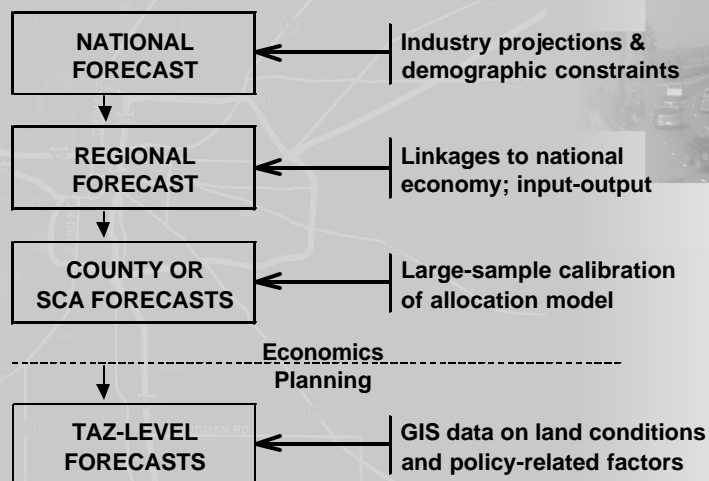

## Development of Baseline Data

- 2004 Estimation
  - Consultation with planning staff
  - Comparison with available data (e.g., building permits)

## Economic and Demographic Forecasts

- Regional forecasting will be done by regional economist Thomas Hammer, PhD
- TAZ allocation will be completed by planners Jane Dembner and Raman Bhatia of HNTB

## Hierarchical Forecasting Sequence

## Allocation to TAZs

- Sub-County Area Forecast as Control Totals
- Decision Rules for Allocation
  - Amount of available land for development
  - Environmental constraints
  - Zoning and future plans
  - Accessibility
  - Agglomeration
  - Other factors
- Reasonableness Check and Adjustment

## Review Process

- Five Steering Committee Review Sessions
  - Base Year Data
  - Regional Forecasts
  - Sub-County Area Forecasts
  - Draft TAZ Allocation
  - Final TAZ Allocation

## Trip Generation/Trip Production Models

- Home Based Work (HBW)
- Home Based School (HBSch)
- Home Based Shop (HBShop)
- Home Based University (HBUniv)
- Home Based Social/Recreational
- Home Based Other (HBO)
- Home Based Pickup/Dropoff

## Trip Generation/Trip Production Models

- Non-Home Based Work (NHBW)
- Non-Home Based Other (NHBO)
- External-Internal/Internal-External/External-External

## 1998 Household Survey

- Conducted in the Fall of 1998
- 2,526 Households
- 6,438 Persons
- 19,815 Trips
- 26,750 Activities

## Trips by Purpose

Tentative Trip purpose definition	Frequency	Percent
Home Based Work	3253	16.4
Home Based Other JTW	1280	6.5
Home Based Other Non-JTW	4705	23.7
Home Based School JTW	11	.1
Home Based School Non-JTW	2127	10.7
Home Based Shopping JTW	205	1.0
Home Based Shopping Non-JTW	1311	6.6
Home Based University JTW	42	.2
Home Based University Non-JTW	307	1.5
Home Based Soc-Rec JTW	92	.5
Home Based Soc-Rec Non-JTW	1176	5.9
Non-Home Based JTW	1675	8.5
Non-Home Based Work Related	264	1.3
Non-Home Based Non-Work	3363	17.0
<b>Total</b>	19811	100.0
Missing	4	.0
<b>Total</b>	19815	100.0

## Passenger or Driver

	Frequency	Percent	Valid Percent	Cumulative Percent
Traveler	14562	73.5	73.5	73.5
Passenger	5249	26.5	26.5	100.0
Total	19811	100.0	100.0	
Missing	4	.0		
Total	19815	100.0		

## Survey Modes

Mode	Frequency
Walk/WheelChair	1,139
Bicycle	47
School Bus	722
Public Bus	376
Passenger	5,248
Driver	12,225
Taxi/Limousine	20
Other	34
Refused	4
Total	19,815

## Trip Production Model Types

- Cross classification tables for all other trip purposes
- HBW Logit utility choice model to determine home based trips that have 1 or more stops en route to work

## Special Generators

- Memphis International Airport
- FedEx Operations at Memphis International Airport
- FedEx Headquarters in Collierville
- Graceland

## External Trips

- External to Internal trips based on Southeast Michigan Council of Governments External-Internal Model
- External to External trips based on Synthesized Table from TRB 365

## Cross Class Data

		Number of people in the household - 4 categories				Total
		1	2	3	4+	
Categorised number of workers	0	798	959	272	550	2,579
	1	1,319	1,661	1,469	3,516	7,965
	2	0	2,147	2,060	3,840	8,047
	3+	0	0	337	893	1,230
Total		2,117	4,767	4,138	8,799	19,821

		Number of Vehicles					Total
		None	1	2	3	4+	
Categorised number of workers	0	532	1,244	696	81	26	2,579
	1	600	3,171	3,372	479	343	7,965
	2	223	1,405	5,115	919	385	8,047
	3+	84	115	391	249	391	1,230
Total		1,439	5,935	9,574	1,728	1,145	19,821

## Trip Distribution

- Develop impedance matrices
- Develop model estimation data set
- Estimate the logit destination choice models
- Perform model validation

## Impedance Matrices

- Will test composite impedance measures
- Intrazonal utility - options
  - Impedance based on “nearest neighbors”
  - Function of zone area
  - Dummy variable based on area type
- Terminal times
  - Based on area type

## Destination Choice Model

$$\text{Prob}(i) = \frac{\exp(U_i)}{\sum \exp(U_j)}$$

- Alternatives are destination zones
- Utilities are functions of impedance from origin, attractions (size variable), socioeconomic variables

## Estimating Destination Choice Models

- Cannot include all zonal alternatives in estimation data sets
- Need to sample destinations (~ 40) for each observation
  - Chosen zone
  - Random sample of other zones

## Intermediate Stop Models (for Indirect Work Trips)

- Multinomial logit models
- Impedance measure based on additional time between origin and primary destination
- Can consider limiting choice set of zonal alternatives

## Mode Choice

- Prepare model estimation data set
- Determine candidate variables
- Estimate multinomial logit models
- Test nested model structures

## Model Estimation Data Set

- Household survey data set
- Transit on-board survey
- Level of service data – network skims

## Transit Path Building

- Need to define:
  - Auto operating costs
  - Auto occupancy levels for highest category
  - Initial weights for OVT, cost components
- No minimums/maximums in skims (recent FTA guidance)
  - Need to consider non-linear functions

## Variable Definition Criteria

- Must be available in data set for estimation
- Must be available in application
- Must be available for forecasting

## Modal Alternatives

- Walk/bicycle
- Transit – auto access
- Transit – walk access
- Drive alone
- HOV (occupancy levels to be determined)

## Model Estimation

- Determine whether coefficients need to be constrained – need to consider:
  - Reasonableness
  - Relationships among coefficients
  - Experience from other models
  - FTA guidelines
- Nesting structures – test alternatives

## Truck Model Development

- Quick response Freight Manual procedures
- Observed counts to calibrate generation rates
- Matrix Estimator process for distribution calibration

# Truck Trip Generation

Generator	Commercial Vehicle Trip Destinations (or Origins) per Unit per Day			
	Four -Tire Vehicles	Single Unit Trucks (6+ Tires)	Combinations	TOTAL
Employment: *				
• Agriculture, Mining and Construction	1.110	0.289	0.174	1.573
• Manufacturing, Transportation, Communications, Utilities and Wholesale Trade	0.938	0.242	0.104	1.284
• Retail Trade	0.888	0.253	0.065	1.206
• Office and Services	0.437	0.068	0.009	0.514
Households	0.251	0.099	0.038	0.388

# Truck Trip Distribution

$$V_{ij} = \frac{O_i D_j F_{ij}}{\sum_{j=1}^n D_j F_{ij}}$$

**Four-tire commercial vehicles:**

$$F_{ij} = e^{-0.08 * t_{ij}}$$

**Single unit trucks (6+tires):**

$$F_{ij} = e^{-0.1 * t_{ij}}$$

**Combinations:**

$$F_{ij} = e^{-0.03 * t_{ij}}$$

- Four-tire commercial vehicles -- 40 minutes
- Single unit trucks (6+tires) -- 30 minutes
- Combinations -- 200 minutes

# Truck Time of Day Considerations

Hour		Commercial Vehicles		
From	To	Four-Tire Trucks	Single Units (6+ tires)	Combinations
12	1	0.7%	0.7%	2.3%
1	2	0.4%	0.6%	1.8%
2	3	0.4%	0.6%	1.5%
3	4	0.4%	0.5%	1.7%
4	5	0.6%	1.1%	2.3%
5	6	2.0%	3.0%	3.7%
6	7	6.9%	5.0%	4.3%
7	8	6.6%	7.3%	6.0%
8	9	6.4%	7.2%	5.1%
9	10	5.2%	7.8%	7.1%
10	11	5.7%	7.0%	6.3%
11	12	5.4%	7.5%	6.8%
12	1	5.5%	6.8%	6.9%
1	2	5.8%	7.1%	6.3%
2	3	6.4%	7.7%	6.2%
3	4	7.8%	7.7%	5.3%
4	5	8.6%	6.6%	5.1%
5	6	7.1%	5.1%	4.0%
6	7	5.8%	3.5%	3.9%
7	8	3.3%	2.4%	3.0%
8	9	2.9%	1.6%	2.9%
9	10	2.6%	1.3%	2.6%
10	11	2.0%	1.0%	2.5%
11	12	1.3%	1.0%	2.3%
Total		100.0%	100.0%	100.0%

## Time of Day Modeling

- Placement in Model Stream
  - After Trip Generation, prior to Distribution
- Four time periods
  - AM, Mid-Day, PM, and Off-Peak
- Duration and time to be based on available data

## Assignment

- All-or-Nothing Pre-Load
  - Heavy Commercial Vehicles
  - External-External Trips
- Equilibrium Multi-Class Assignment
  - Autos and Light Trucks
- Pathfinder Transit Assignment

## Model Calibration and Validation

- Validation standards memo to be prepared and approved by MPO
- All model components to be validated

## Model Validation Checks

### Model input data

- Use of GIS to socioeconomic and network data
- Comparison of socioeconomic data to other sources
- Network path, connectivity, other reasonableness checks

## Model Validation Checks

### Trip generation

- Comparison of trips by purpose and trips per demographic unit to NCHRP 365, NHTS, and other national values
- Balance between attractions and productions

## Model Validation Checks

### Trip distribution

- Trip length frequency distributions by purpose
- District level O-D
- Intrazonal trips by purpose

## Model Validation Checks

### Mode choice

- Reasonableness of model coefficients and relationships among them
- Target matrix for each trip purpose – trips by mode and market segment
- Sensitivity checks (elasticities)

## Model Validation Checks

### Trip assignment

- VMT by functional class
- VMT by geographic market segment
- % RMSE check
- Screenlines/cutlines
- Transit volumes by route group

## Development of Future Year Models

- Existing plus committed (EPC) projects
- Develop EPC networks
  - 2020
  - 2030
- Scenario Management
  - One layer
  - “Born-On” and “Expiration” Dates
  - “Out” Folder for All Output Files

## Development of Future Year Models

- Develop interim and horizon year socio-economic forecasts
- Develop interim and horizon year transit ridership forecasts
- Develop freight movement forecasts
- Run interim and horizon year assignments

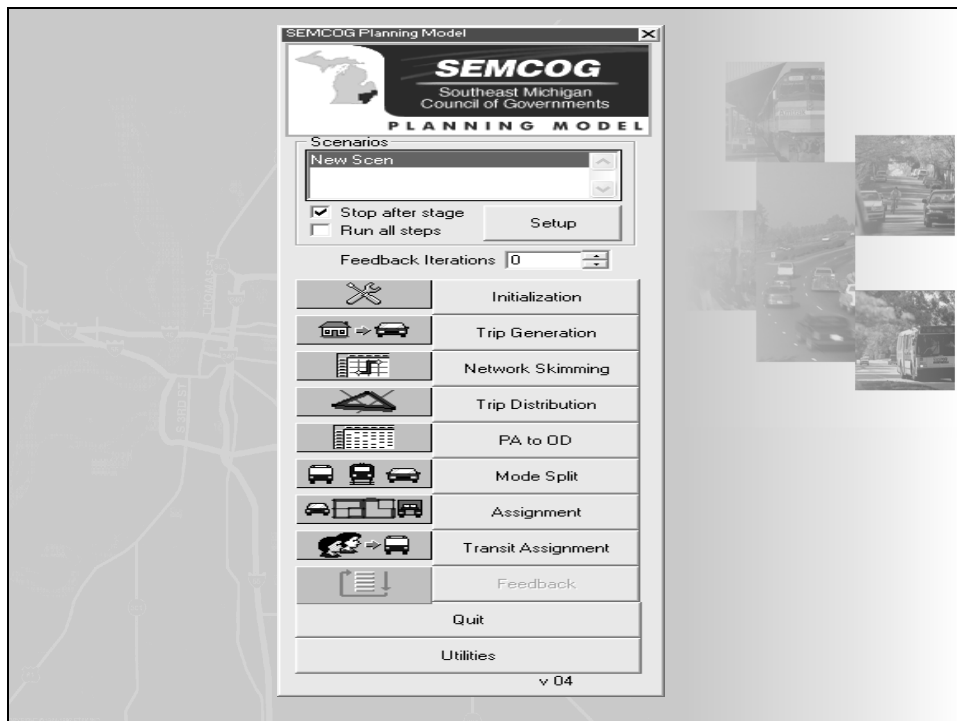

## Development of Future Year Models

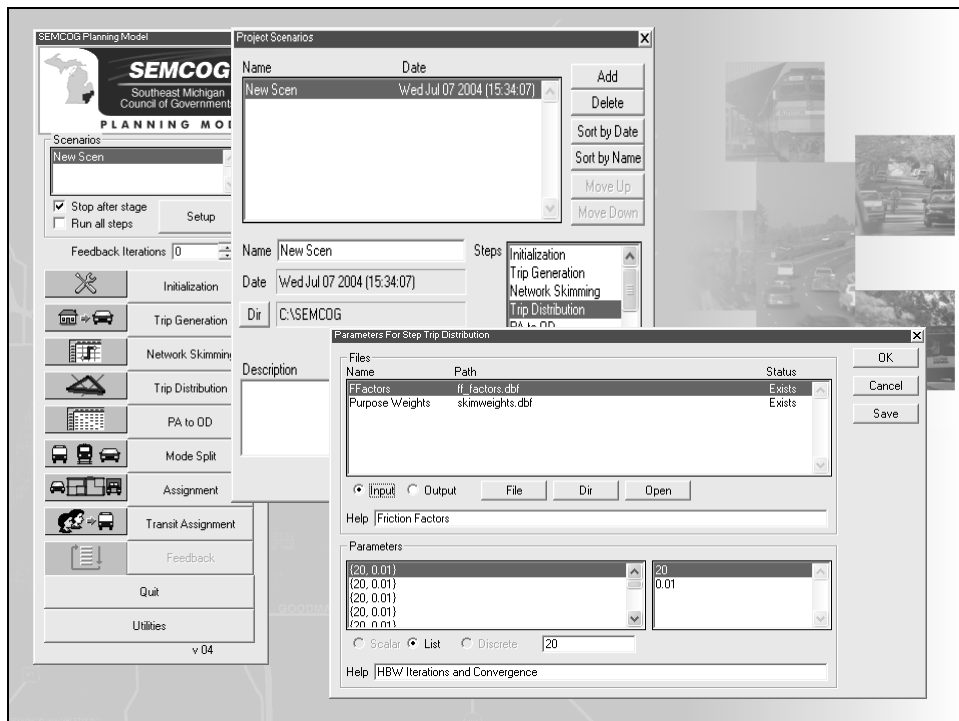

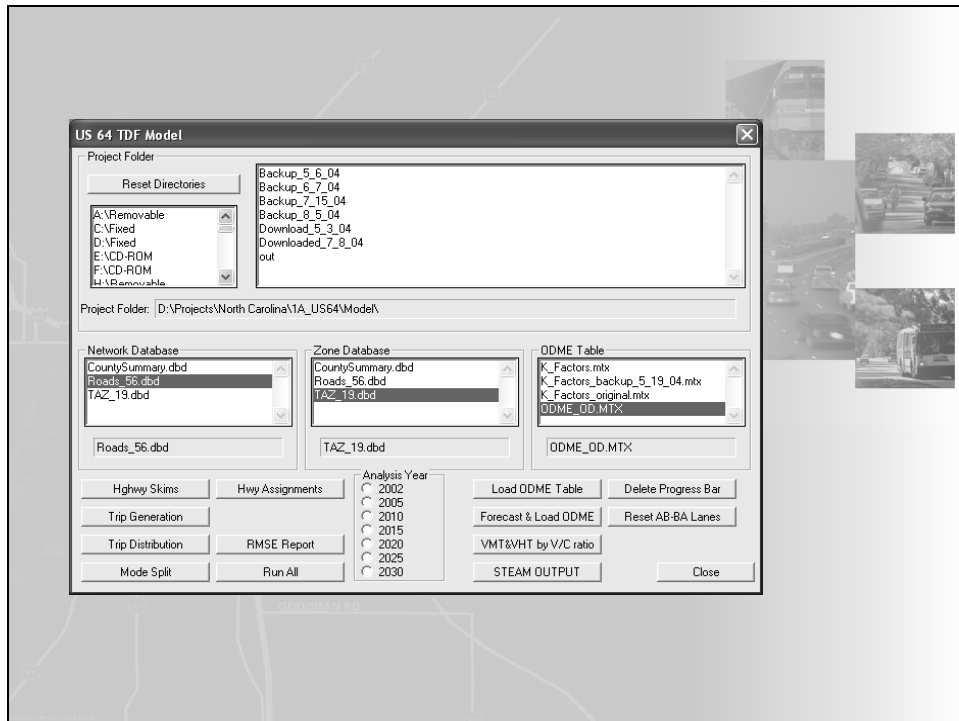

- EPC capacity and LOS analysis
- Infrastructure deficiency analysis
- Recommended deficiency improvements
  - Short-term (0 – 5 years)
  - Mid-term (5 – 15 years)
  - Long-term (15 – 25 years)

# Model Automation

- User Interface to step through model or run entire model suite
- Allow user to change “some” model parameters and variables
- Scenario management capability
- Output in common data exchange formats
- Meaningful execution reports

## Training

- On-Site Training
  - Stakeholder Participants
  - Two training sessions
  - Duration
  - Topics

## Documentation

- Technical Memoranda
- Model Development Methodology
- User's Guide
